WHAT TO EXPECT

- Faster time to market—streamline the flow of digital design data
- Boosted productivity—access CAD data enterprise-wide
- Lowered production costs—trim scrap costs by cutting down on errors and engineering change orders
- Increased collaboration—connect functional areas and your supply chain partners
- Fully leveraged design data—work with parts and assemblies, digitally organize related data, even embed CAD files in Microsoft Office documents
- Safeguarded intellectual property—hold onto original CAD files

You have to get past a lot of hurdles before you can share your 3D and 2D CAD data with each person who needs access to it. You could insist that everyone operate the same specialized CAD software used by your engineers. But that would be very expensive and require widespread CAD expertise, which by its nature is in limited supply. Besides, sending original CAD files over the Internet places your intellectual property at risk. And their large file sizes demand extra bandwidth, storage, and IT support—a huge, ongoing, and unnecessary expense.

Communicating multiple-format CAD and related design data to multiple parties—safely, quickly, easily—will save your manufacturing enterprise and supply chain considerable time, money, and effort. So how do you do it? With a digital design communications platform that enables everyone to seamlessly share and collaborate on compact 3D and 2D CAD product data: the Actify Suite of Products.

SpinFire Professional—Streamline data access and communications

Actify SpinFire™ Professional streamlines communication of 3D and 2D CAD files and associated data by enabling users to save and share design data as a compact, system-neutral .3D file. Engineers, CAD designers, individuals providing quotes and estimates, procurement, shop floor, IT, sales, and marketing professionals can share and access native CAD data from diverse CAD systems— even add mark-ups and take measurements—without using CAD software. Electronically organize and publish associated design files and documentation, and add notes and other related documents, hyperlinks, and multiple models. Create customized SpinFire-based plug-ins. Display, and interact with, Product Manufacturing Information (PMI) annotations. Easily and efficiently share every .3D file across your enterprise—without distributing original CAD drawings.

Actify Publisher—Centralize and automate publishing

Especially useful for document management and project coordination personnel, Actify Publisher™ centralizes and automates batch publishing of native 3D and 2D CAD files to Actify's user-friendly, compact .3D file format.

Its dashboard interface provides exceptional control for managing and monitoring the entire publishing process, simplifying access to design data files across the enterprise. By streamlining the publishing of large native CAD file archives, and ensuring timely conversions, Actify Publisher can save your enterprise enormous amounts of time and money—especially compared to manual CAD data management methods.

SpinFire for Microsoft Office—Reach every desktop

With SpinFire™ for Microsoft® Office, you can embed interactive 3D and 2D CAD data directly into your Office documents. By leveraging design data throughout your organization—in fact, by making it accessible to virtually every desktop computer—you enable information workers to perform their jobs better and more efficiently. SpinFire for Microsoft Office is especially useful for quoting and estimating, developing technical publications, preparing design presentations, sharing design reviews, and accessing meta-data from CAD files.

Actify DesignShare—Centrally manage and collaborate

Actify DesignShare™ unites the Actify Suite of Products with the document management, sharing, and collaboration capabilities built into every Microsoft® SharePoint™ managed environment.

Workgroups use it to quickly and securely track, collaborate on, and manage CAD data, plus all related documents, enterprise-wide. The Actify DesignShare solution is easily deployed, affordable, simple to work with, and equally well-suited for use by small teams and large enterprises. Use it to create customizable team worksites; to view, annotate, and upload project information; and to automatically

convert, on demand or in batch mode, all major 3D and 2D native CAD data formats to Actify's .3D format. Actify DesignShare is ideal for companies that design or manufacture mechanical products and want to both facilitate CAD data collaboration and control the communications process.

SpinFire Reader—View CAD files for Free

SpinFire™ Reader provides free, view-only access to your .3D design files. Intended for supply chains, casual users, managers, partners, customers, and others who only need to view CAD data, this easy-to-use, downloadable solution ensures valuable CAD data flows more freely throughout your enterprise and supply chain.
